OMETHING ABOUT WHICH BUT LITTILE IS POPULARLY KNOWN.

An Advance in the Art-Discoveries in

But this is the age of color; and in noth-ing else during the last thirty years has science made such a forcible impression he usages of domestic life as it has nade through its contributions to the caught and reproduced in fresh hues. The very flowers and fruits, though still beautiful and attractive on account of their odor and flavor, have lost the transcending superiority in tints for which they were once noted, and must consent to become only common contributors to an ocean of color, where every wave is a translucent marvel. According to M. Chevreal, the resources of the dyer now cover 15,000 chromatic shades. But after counting 14,960 shades it would have been just as well had this author stopped calculating and pronounced the remain infinite in number.

This sudden advance in the art of dye ing has been due to the general cause that has contributed so much to civilization during the last hundred years. It has been due to the discoveries in chemistry. Through all the many centuries of history the world knew only of natural dyes, and down to the beginning of the present cen-tury, or rather till past the middle of this in the cold, dark world to sprawl in the gloaming; but luckily, all these prettiest of pretty things have nothing on earth to do with the war in Africa.

What I want is just to see the shape of the galoot's head who has the effontery to say that Democracy is not in tiptop shape all over this blessed land.

Free whiskey and taxed necessaries, protection for protection is saike, a "non

Chevroul's 15,000 chromatic thats. But he should be a man with a trained eye, and a person who is color blind will

Dyeing is one of our most important industries, employing in New York alone nearly 3,000 men, at wages averaging about \$18 a week. It does not belong as commonly supposed, but it is a separate art. It may be easily seen, too, that there is no other industrial art where there is more likely to be a marked differ nee in the capacity of different workmen. First, there is demanded the accomplishment of knowing the mechanical process to perfection. It is an operation that must be timed to a nicety, as the best results may be lost even at the moment of fruition. Then, again, no man can ever become a good dyer, no matter what the length of his training, who is in any way defective in his sense of color. In a cer-tain sense the dyer is a professional colorfinished fabric is due to the taste for combination in the designer of patterns, the dyer has his share, and a very large share, vance in the art of dyeing that makes the chief superiority in the coloring of the more modern goods, and not the advance in the art of combination and design.

Were the subject of dyeing to be treated broadly it might be made to include other arts besides the art of dyeing textile fabrics. Other material may be made to receive coloring matter in a manmade to receive coloring matter in a man-ner to change its appearance as com-pletely as the appearance of these fabrics is changed. The endolithic process in the treatment of marble furnishes an in-stance. Marbles subjected to this pro-cess are as completely dyed when it is join a square issue on the tariff, he would take the low tariff side. That is certainly the issue now beyond all possible doubt, and Hubbard and Duncan sible doubt, and Hubbard and Duncan to Look at the tenance, painful gait, and listless air, dver's art and stands as a distinct discovery, with only the antiquity of a few years to make it venerable. Chemistry - An Important Industry. preventives of consumption.

Scrofulous and delicate girls should be Scrottious and deleate girls should be brought up on these simple but potent relishes, together with carrots and pars-nips, which last are the best food for quick and healthy plumpness. The rich-ness of the milk of Alderney cows is due to long feeding on parsnips in the Chan-nel Island, and the finest and fairest chilresources of the dyer. Go through the dry goods district and observe the win down. Look into the carpet ware rooms, the furniture ware rooms, or even into the gentleman's furnishing store. Everywhere the rainbow seems to have been caught and reproduced in fresh lutes. The in a small glass of water three times a day, half an hour before meals, till they feel hungry; then feed them on crusty brown bread and muffins, with a daily change of the sweet, succulent roots, besides fruit and meats. It is surprising how they will tone up. The dose of phos-phate is not to exceed twelve drops, as a very little is better borne than large doses, which are apt to produce rush of blood to the head.—Detroit Free Presa.

WHO CAN EXPLAIN IT!

A Strange Disease on the Little Island of St. Kilda-Another Story.

Few portions of the habitable earth past three centuries than the little island of St. Kilda, which lies off the coast of Scotland. No people are so strongly attached to their home as the inhabitants of this lonely place. Benevolent persons in Great Britain have repeatedly offered to move them all to Australia or Canada, and to provide for their wants till they could get established. They have, however, always declined these propositions. The climate of the island is so severe that it is scarcely endurable, the sea about it is so tempestuous at most times that vessels cannot approach it, while the soil is so sterile that it will produce little but grass, potatoes and barley.

The people suffer from cold, hunger and isolation. It is also affirmed that they suffer from the visits of strangers,

even those who come on errands of mercy.
All writers on St. Kilda affirm that the arrival of a vessel is immediately followed by a peculiar sort of influenza which af-fects all the people. Rev. Aulay Mac-aulay, great grandfather of the distinguished historian, wrote a work on St. Kilda, in which he speaks at length of this strange disease. Martin, who wrote an account of the island and its inhabitants nearly two hundred years ago, also refers to it. In giving evidence before the crofter commission, the minister of the inhabitants of the control of the crofter commission. the island, who is represented as a gen-tleman of great learning, enumerated the

spirits by the trade. This fixes the scarlet colors founded upon cochineal: but alum is used as a mordant for crimson red, and cherry red is produced with a tin mordant from ammoniacal cochineal. Turkey red is produced from madder on an aluminous basis. Thus ran the formula in the old art of dyeing, and thus it runs still.

pampers, and Morton to treasure their boodle.

I have lately heard of some gratuitous and prophetic slush about the Mills ous and prophetic slush about the Mills bill reducing the price of digging coal to 30 cents per ton. I should like to hear these profound statesmen, who would crawl in the dust before the great unwashed Jinmie Blaine, harmonize this brilliant statement with the stern fact that Jeems voted in 1871 to put coal on the free list!

Protectionists, in their absorbing love for the working man, forget to whisper in his ear, as they embrace him just before an election, that otter of roses (perfumery) is admitted free, while he jays a tax of 180 per cent. on castor oil; disvoords are admitted free, while he jays a tax of 180 per cent. on castor oil; disvoords are admitted for the nature of the sound of the sample enormous in this very valuable and look wretched, even in the most cheerful society, and melancholy on the jolliest occasions. Dr. J. H.Metons the profunction of the simple two rejines Boming.

Probably no one thing has caused such a general revival of trade at Griffin a Bon the free list!

Protectionists, in their absorbing love for the working man, forget to whisper in his ear, as they embrace him just before an election, that otter of roses (perfumery) is admitted free, while he jays a tax of 180 per cent. on castor oil; disvoords are admitted for the part of the control of the sample of the per cent. on castor oil; disvoords are admitted for the part of the p

supported by many authorities, in a leading magazine has called out many expressions of opinion. All admit that it was impossible for the inhabitants of an island near the South Pole to obtain information from those living on St. Kilda. Some believe that the natives of several islands have killed the crews of vessels because they centracted the influenza from strangers who had previously landed. Few have attempted to solve the mystery. It has lately been the fashion to deny any phenomena that could not be explained by natural causes. The old argument of Dr Johnson has been employed by many persons to disprove the existence of many things. Still thousands are ready to give evidence of their constant occurrence. People who believe in things that they cannot account for are classed as super-stitious, and few are willing to be thus designated.—Chicago Times.

Life in the Bahamas,

Dwellers in the dark and somber north ness that seem to radiate from earth and The mere sense of existence becomes in itself a happiness; one can understand what animals probably feel in pleasant pastures on brilliant days. Then, as the sun sinks slowly downward, the golden heaven glows over a rejoicing earth, flush-ing every moment into richer beauty beeath the departing rays, while rosy beams of light streaming upward like so many auroras is a singular and very beautiful effect often to be seen in a Bahamasunset. When the sun has set new beauties ap-pear, every bush and tussock becoming alive with thousands of fire flies; and when

a silvery green moon rices in the calm deep sapphire sky, it is difficult to decide whether night or day be the more full of loveliness. Besides the fire files, a fire beetle—one of the Elytra—is a singular insect, with a brilliant green phosphorescent light proceeding from two round spots on the thorax, added to which, when excited, the insect has the power to emit a regular blaze of light from the segments of the abdomen, of such brilliancy that one can read by its light. In Cuba ladies fasten these clytra as ornaments in their hair, or let them flash beneath the folds of tulle dresses.—Mrs. Blake in Nineteenth

Do we want Mexico? Perhaps it would be hard to make the man who has never been there understand that we do not. It is a rich country, and will develop yet greater wealth. It grows every fruit and crop grown on the globe. Portions of it grow four crops a year—two of wheat, one of corn and one of beans or pepper—

and continues to do so year after year for centuries. By lying so far south it will never, no matter under what rule or cir-cumstances, become like the United States in habits, customs or ways of thinking.
Mexico will, however, in time make a
good neighbor. President Diaz is friendly
to this nation, which, under Mexican
rule, means a good deal. There should be
a still further increase of the American
population there, who when they conpopulation there, who, when they con-form to established habits and customs, will make money. American houses have started and failed, but they failed because the managers insisted that things should be done the American way and not the Mexican way. It would have been a miracle if they had not failed.—Mexico Cor. Kansas City Journal.

A Good Idea.

An English canal company makes use of the locomotive upon the towing path. A small engine employed upon eighteen inch mils draws four boats at the rate of seven miles an hour.

Something About House Flies. Some one has asked where do flies go in the winter. This is a question of some interest, for a house fly is born fully grown and of mature size, and there are no little flies of the same species, the small ones occasionally observed being different in kind from the large ones. The house fly does not bite nor pierce the skin, but gathers its food by a comb or rake or brush like tongue, with which it is able to scrape the varnish from covers

of books, and it thus tickles the skin of persons upon which it alights to feed upon the perspiration. A fly is a scavenger, and is a vehicle by which contagious diseases are spread. It poisons wounds, and may carry deadly virus from decaying organic matter into food. It retires from the sight at the beginning of winter, but where it goes few persons know. If a search of the house is made, they will be found in great numbers secreted in warm places in the roof or between the partitions or floors. Last winter we had occasion to examine a roof, and found around the chimney myr iads of files hibernating comfortably and sufficiently lively to fly when disturbed "in overpowering clouds." No doubt this is a favorite winter resort for these crea-

tures .- Wilmington (N. C.) Messenger.

Speaking of Harriet Hosmer, the cele-brated sculptor, who in her childhood lived at Watertown, Mass., an old citizen of that town, who knew the family well, says that her mother and sister had died from consumption, so her father, who was a physician, determined to give her all the advantages of an outdoor life. She was taught to ride and shoot and climb trees and do everything that boys do. When she was sent to school she found it was difficult to be a boy of the same and the sent to school she found it was difficult to be a sent to school she do. When she was sent to school she found it very difficult to bend gracefully to rules and regulations, and the consequence was that she was twice expelled. But she was only wild, not vicious, and finally buckled down to study. At the age of 19 she developed a decided talent for sculpture, and her father fitted up a studio for her; but it was afterward determined to send her to Rome for study, and there the high spirited girl worked hard and soon had a pleasant home of her own.—New York World. own -New York World.

An Unwelcome Guest. thereby hangs a trifling but not unamusing tale. At a recent wedding in Arlington Street church one of the ushers saw a lady come in who was so stylishly dressed that he immediately jumped at the conclu-sion that she must be a guest of import-ance. He accordingly offered her his arm and started down the sisle to escort her for the families of the contracting parties Just as he neared the slip into which it was evident he meant to show her the "Can you tell me whose wedding this

The usher's evebrows contracted invot

untarily.
"Certainly." he answered. "It is that
of Miss Blank and Mr. That." Then, being a man of presence of mind, he kept coolly on down the aisle, turned and crossed the chancel, brought the lady up the next aisle, and seated her obscurely near the door.—Boston Letter.

The attention of experimenters is being directed to the subject of photography without lenses, which offers possibilities yet unknown. The plan yields an important advantage in the fact that images of various sizes may be obtained with a of various sizes may be obtained with a single apparatus by simply changing the distance of the camera front from the plate and varying the opening from one-fiftieth or one-sixtieth of an inch for small pictures to one-twenty-fifth of an inch for large ones. The negatives lack the sharpness given by lenses. A curious result of this has been obtained by Capt. Colson in a copy of an engraving in which the contract of line can be seen without. no trace of lines can be seen without a magnifying glass. A present drawback to this kind of photography is the length of exposure necessary, but this will doubtless soon be shortened.—Arkansaw
